Spare parts list series IDROGENIUS

Edition 01/2025

Spare parts list

1 REPLACEMENT PARTS CATALOGUE

This catalogue includes all the replacement parts required for the maintenance and service of boilers. This edition of the catalogue supersedes all previous editions.

2 MODELS AND SPECIFICATIONS

Boilers differ in basic characteristics:

2.1 Maximum useful heating power during operation as a building heat source

The models are available with different maximum useful heating power when used as a building heat source. Each of these models is identified by its own model number:

Models 20 (20kW)

2.2 Maximum useful domestic hot water power

The models are available with different maximum useful domestic hot water power when used as the heating of domestic hot water. Each of these models is identified by its own model number:

Models 25 (25kW)

2.3 Mixed-type operation/operation as a building heat source only

Mixed-type boilers are used to heat water for use in a building heating system, and can also heat hot water for domestic use. This type of boiler alternates between the two operating modes, with the "domestic hot water" function taking precedence over the "building heat source" function. These boilers are identified by the letter "M" in their model number.

3 MODEL IDENTIFICATION CODE/SERIAL NUMBER

Every boiler produced by carries its own model identification code/serial number.

It is important for the service centre to mention this number when contacting the factory (the number must be listed on guarantee claims and service reports; when making requests for technical information, etc.).

The following is a breakdown of the model identification code/serial number and its meaning (reading from left to right):

- A) The maximum useful heating power during operation as a building heat source.
- B) The maximum useful domestic hot water power during operation as the heating of domestic hot water.
- C) The type of boiler according to its functions
- D) The type of gas used by this boiler. The letter "N" is used for Natural gas; the letter "G" is used for liquefied petroleum gas (LPG).
- E) The first five numbers are the actual serial number.
- F) The last four numbers indicate the month (first two numbers) and the year of construction.

These numbers are used in this catalogue to distinguish between versions of the same model with different modifications.

4 REPLACEMENT PARTS CODE

Each currently available replacement part is uniquely identified by its own replacement parts code. The replacement parts code consists of a table code and a position code.

4.1 Table code

The table code is a sequence of letters and numbers which uniquely and clearly identify each table. The table code can be found on the upper right of each table (see 4.3).

A validity chart for the table is located at the bottom of the table. This chart lists the models covered by the table.

M300V.2025SM		

4.2 Position Code

The position code is a number which is used to identify a particular object on the table.

To make identification easier, position codes for kits have a different format from position codes for individual parts.

515	Position code for a kit (or assembly)	Position code for an individual part	125
-----	---------------------------------------	--------------------------------------	-----

A label can be found next to the position code. This label is used to provide additional information on the replacement part and makes identification of the part easier:

A – Type of gas

515_{G20} 125_{G20} G20 = Natural gas

515_{G31} 125_{G31} G31 = Propane (LPG)

B – Validity restrictions

515_(M) 125_(M) For model M300V.2025SM only

4.3 Composition of the replacement part code

Each replacement part code includes a table identification code and a position code. A position code is only listed for replacement parts which are currently available.

The replacement part code consists of the table code (which can be found on the upper right of the table) plus the position code (in two formats: individual part or kit).

The components of a kit are enclosed in a broken line. A kit may contain other complete kits, or portions of other kits.

In some tables, a replacement part may be identified with an arrow and a complete replacement part code (table code + position code). This means that the part is available, but must be ordered with the code listed. Also, any explanatory notes must be read before ordering.

(2025)

4.4 Using the replacement parts code

The replacement parts code must be included on all documents which are used in service reports, orders for replacement parts, guarantee claims, etc.

Spare parts list

Table		Edition	N° of pages
BI1801 Part 1	Water group	0125	1
BI2112 Part 2	Water group	0125	1
